

Are you ready for a Windows SBS 2008 server?

Windows Small Business Server (SBS) 2008 is an integrated server solution that helps you protect your business data, increase productivity and present a more professional image to customers. By providing many of the features used by larger companies — e-mail, and Internet connectivity, internal Web sites, remote access, support for mobile devices, file and printer sharing, backup and restore — Windows SBS 2008 gives you the tools you need to help grow your business.

1. It offers a comprehensive, all-in-one solution.

Windows SBS 2008 takes the guesswork out of selecting software for your network. It brings together the Microsoft® product technologies that businesses need most into a single solution. These technologies are integrated into one product, making it easy for you or your IT consultant to install and manage.

2. Helps you stay connected to customers, vendors, and suppliers.

With access to contacts, appointments, and files from any Internet-connected PC or mobile device, you can be responsive to customers, vendors, and suppliers even when you're not in the office.

3. Helps protect your business and prevent data loss.

Windows SBS 2008 helps protect your vital business information from loss by backing up the data on your network, and enabling you to recover accidentally deleted files. SBS 2008 also enables you to recover data on your network in the event of disaster. With easy-to-use interfaces, you or your IT consultant gain better control of your data, PCs, and network.

4. Access business information and resources from virtually anywhere at any time.

Be productive whether you're out of the office, at home, or on the road. Windows SBS 2008 gives you secure access to business contacts, calendars, e-mail, files, your desktop, and even shared resources from any Internet connected PC, from virtually anywhere at any time.

5. Increase your business capacity.

Streamline business processes and improve day-to-day efficiency with Windows SBS 2008. It helps automate daily processes by providing a central repository for storing and sharing information more easily — and helps simplify communications with familiar Microsoft technologies.

6. Stay safe with anti-spam and antivirus protection.

Windows SBS 2008 offers anti-spam and antivirus technologies to help protect your business information and your intellectual property from malicious attacks, viruses, and spam.

7. Keep your network healthy and up-to-date.

Windows SBS 2008 provides you with the latest updates to minimize downtime and help ensure network health by keeping your PCs and servers current. Easy-to-read "green check" reports give you a quick view of Microsoft software updates, PC and server status, antivirus status, and backup progress.

8. Take advantage of powerful technologies designed and priced for small business.

Windows SBS 2008 includes multiple technologies optimized specifically for small businesses — at an affordable price. It enables you to share resources and equipment, such as Internet access, printers, and fax machines, so you get the most value from your technology investment.

9. Get the flexibility and scalability you need.

As your business needs change, Windows SBS 2008 enables you to grow. You can easily add users, servers, and applications. It supports your critical line-of business applications and is designed to integrate with your existing Microsoft technology.

10. Create a bigger presence in your market.

Differentiate your business and present a more professional image to prospects and customers. Windows SBS 2008 offers e-mail marketing capabilities, business Web sites, and tools for creating your own Web site.
